Macrosuede*

The original and the best!

Macrosuede and Macrosoft Plain Hanger with texture close up

Since its introduction to the world marketplace in August 2000, Macrosuede has become an iconic name for the finest in man-made suedes, far exceeding performance standards for upholstery textiles in every major category. And it is still the only man-made suede in the world to incorporate 'Healthguard' in-built protection against dust-mite pathogens. Great news for over 2 million Asthma sufferers in Australia.

Warwick Macrosuedes* are now exported to over 50 countries world-wide, and have become famous for their unique performance characteristics which include their natural suede appearance, high colour fastness to abrasion and light, inherent stain resistance and liquid repellency, scratch resistant surfaces (ideal for families with pets), fully reversible cushion properties with high comfort 'breathability' (as a major advantage over low priced leather furniture), lasting good looks and easy cleanability.

Now we are pleased to introduce our latest commercial and domestic colour palettes in 97 options including subtle neutrals and eye candy brights!

Beware of imitations - look for the Macrosuede Hallmark! Lesser quality suedes are easily distinguished by their light weight and shiny or 'grainy' surface character, even 'striping' caused by the use of cheaper yarns and inferior dyestuffs. If the finished weight of the fabric is reduced too much, the upholstery is also prone to unsightly 'puckering' along seams.

Macrosuede, Macrosoft and Macrohide are all registered trade-marks that guarantee the exclusive quality and tailoring characteristics of Warwick Fabrics' high performance man-made suedes. Since 2006, to protect against cheap copies, each of these products included a printed hallmark on the reverse of the fabric.

So beware of generic suede names such as 'Microsuede', and where possible ask your furniture retailer to unzip cushion covers to show the true Macrosuede hallmark.

Each Macrosuede quality is piece dyed* and tested to Heavy Commercial performance ratings and each

is part of our 'Halo' fabric range. As such each is woven to precise specifications and tested to exacting standards for colourfastness, abrasion, inherent stain resistance and safety*. Halo fabrics are also resistant to pilling, mould and mildew and impervious to attack by moths, silverfish and insect pests.

'Halo' is the Warwick hallmark for high performance easy clean fabrics. They are also compatible with independent retail fabric protection and guarantee programs. These programs enhance the fabric's ability to resist liquid staining by providing a spill repellent surface and/or warranties to cover accidental damage.

* Healthguard™ is a registered trademark of the Healthguard Corporation Pty Ltd. An Australian Made and owned company.

* Piece Dyed - fabrics are first woven in natural 'greige' yarn colours then bulk dyed after weaving. This provides greater flexibility and broader scope for extensive colour ranges.

*Tested for absence of Free Formaldehyde (ISO14184-1:1998)

For the latest Macrosuede/Macrosoft colour samples and for full test details including AS1530.3 results please contact your Warwick Sales Consultant.
